**Construction and Traffic**

**Q: How will construction affect traffic?**

A: Construction will require lane closures during the project. Lane closures provide an adequate work space for the safety of the workers. As workers prepare for construction, motorists should expect intermittent lane closures and minimal delay.

As construction progresses, motorists will only be able to make left turns at signalized intersections. Temporary left-turn restrictions are also possible at signalized intersections; however, consecutive intersections will not be restricted. Sidewalk access will be maintained to the extent possible for pedestrians.

**Q: What is being done to minimize traffic delay for commuters?**

*When fewer than two lanes in each direction are open, a moveable barrier will be used to minimize traffic delay. The barrier will favor eastbound traffic during the morning commute and westbound traffic during the evening commute. A moveable barrier effectively reduces delay during peak travel times.*

**Q: How will utility work impact traffic?**

A: Motorists should expect lane restrictions as crews complete utility relocations. The project team will notify property owners if temporary interruptions in utility service and access restrictions take place.

**Q: Will construction take place at night?**

A: The contractor is responsible for obtaining a permit for any night work performed on the project and abiding by restrictions outlined in the permit.
